Winter Imaging Update on the Slopes

February 5-8, 2018

Hotel Terra - Jackson Hole, Wyoming

UCSF Department of Radiology
and Biomedical Imaging
<https://radiology.ucsf.edu/cme>

Course Outline

This four-day course is intended to address practical clinical imaging applications for both traditional, routine “bread-and-butter” imaging scans, as well as recent developments in newer, emerging imaging methods. Lecture topics covered in this series represent frequent and common syndromes encountered by radiologists when reviewing images of the breast, abdominal, pelvic, neurologic and thoracic subspecialties.

All presentations will provide the attendees with increased competency in multi-modality imaging options by addressing the main indications for use of CT, MR and US in the imaging of different organ systems. Lectures will review corresponding protocols for each modality, examine potential pitfalls to be avoided, and discuss patient safety factors including reduced radiation dosage.

Self-Assessment

This course will offer 18 Self-Assessment credits (pending approval and subject to change): 3.5 in Breast, 3.5 in Genitourinary, 3.5 in Neuro, 4.0 in Thoracic, 3.5 in Ultrasound.

As of January 1, 2013, updated MOC Part 2 requirements: 75 CME credits every three years, at least 25 of which must be self-assessment activities (SA-CME, which includes SAMs). For more information: www.theabr.org/moc-dr-comp2

Course Objectives

At the completion of this course, the attendee should be able to:

1. Differentiate various abnormalities on CT urograms;
2. Recognize typical and atypical appearances of lung cancer;
3. Describe the proper management of a renal carcinomas;
4. Evaluate the adnexa and uterus in patients with abdominal pain and other symptoms;
5. Utilize ultrasound to assess thyroid abnormalities;
6. Diagnose common abnormalities after renal and pancreatic transplants
7. Identify artifacts on PET/CT.
