UCSF COURSE CHAIR  
**Soonmee Cha, MD**  
Professor of Radiology  
Vice-Chair for Education  
Director, Radiology Residency

MONDAY – FRIDAY

**April 28 – May 2, 2025**

Virtual Live Course

# 2025

## COURSE HIGHLIGHTS

- Five full-day sessions Monday thru Friday (Pacific Time)
- Covers all major subspecialties and imaging modalities
- Includes didactic lectures, rapid-fire cases, and multiple-choice questions
- Bonus lectures on essential physics, safety, and non-interpretive skills
- Over 40 UCSF Radiology faculty from all subspecialties
- Access for online lecture review for 30 days following
- 36.0 *AMA PRA Category 1*™

## OVERVIEW

This course will review the fundamentals of the major organ systems and corresponding imaging modalities (CT/ MR/ US/ X-rays, mammography, nuclear medicine).

The course will consist of case-based, in-depth sessions on diseases of the major organ systems; as well as shorter focused lectures on physics, rad safety, cardiac, nuclear medicine and interventional procedures that are relevant to the general radiologist and radiologist-in-training.

The course will include a 90-minute session with multiple-choice questions on Non-Interpretive Skills relevant to radiology trainees.

To facilitate learning, all lectures will include rapid-fire cases and/or multiple-choice questions (MCQ), as well as “MCQ Galore” sessions that emphasize basic radiology principles in a fast-paced, question format that will be of clinical value to the radiologist on-call and in-training

## OBJECTIVES

At the completion of this course, the attendee should be able to:

1. Identify imaging fundamentals of each of the radiology sub-specialties (organ systems);
2. Prescribe the appropriate utilization of imaging modalities (CT, MR, US, PET, Mammography) for different medical conditions;
3. Implement the appropriate imaging protocols for routine clinical presentations;
4. Recognize indications and markers for interventional procedures, as well as assessment of outcomes;
5. Apply classifications of pathophysiological mechanisms underlying human disease to facilitate differential diagnosis;
6. Refine imaging criteria to optimize image quality/findings and improve diagnostic interpretation.
