

# Master of Science in Biomedical Imaging

## Admitting for Fall 2022

The Master of Science in Biomedical Imaging (MSBI) program provides theoretical and practical exposure to all aspects of medical imaging technology. The program can be completed in one year of full time study and allows students to learn the foundations of medical imaging, explore how imaging is applied in medical practice, and perform independent research under the supervision of faculty that are leaders in this exciting field.

The Department of Radiology and Biomedical Imaging at UCSF features an outstanding faculty and is annually ranked amongst the top programs in the country for both research and training. MSBI students interact closely with faculty and have the opportunity to contribute to research activities in a wide array of applications ranging from image processing to the development of new molecular imaging agents. MSBI students commonly go on to MD and PhD programs, or may choose to work in industries that develop imaging related products or apply medical imaging in product development.

*“Imaging methodology is the heart of cutting-edge research, and the Master's of Biomedical Imaging program at UCSF succinctly delivered a thorough background in this field. As my first experience with graduate school, I couldn't imagine a better program. The pace, the content, and the research community--all of it gave me the skills I needed to succeed in academia.”*
