The Master of Science in Biomedical Imaging (MSBI) program provides theoretical and practical exposure to all aspects of medical imaging technology. The program can be completed in one year of full time study and allows students to learn the foundations of medical imaging, explore how imaging is applied in medical practice, and perform independent research under the supervision of faculty that are leaders in this exciting field.

The Department of Radiology and Biomedical Imaging at UCSF features an outstanding faculty and is annually ranked amongst the top programs in the country for both research and training. MSBI students interact closely with faculty and have the opportunity to contribute to research activities in a wide array of applications ranging from image processing to the development of new molecular imaging agents. MSBI students commonly go on to MD and PhD programs, or may choose to work in industries that develop imaging related products or apply medical imaging in product development.

“‘The title of this program does not even begin to describe the diversity of knowledge presented to the students in a short year by professors who both care on a personal level and are at the top of their respective fields.”' -Lindsay Conner (MSBI Alumni)

**Application Timeline**

**November 18, 2020**
Application portal opens for applicants enrolling for Fall 2021

**January 2021**
Virtual Open House

**February 28, 2021**
Deadline for Fall 2021 applications

**Late March/Early April, 2021**
Notifications sent to all applicants
