

Are you 14-18 years old, want to see your brain change and improve your well-being?

The goal of our UCSF **BrainChange** study is to use MRI imaging to observe brain changes in healthy young people who undergo an **online mindfulness training**.

We are looking for healthy adolescents 14-18 years-old who will get a chance to undergo a free 12-week mindfulness training, in which they will learn self-regulation skills (breathing, yoga-based movements, meditation) that can help them relax and better regulate emotions. The group will meet once-per-week for 1.5 hours online via Zoom.

Participants will also undergo a 1-hour MRI scan before and after the training. MRI scans will take place at a state-of-the-art UCSF facility at Mission Bay. Participants will receive up to \$220 in gift cards for completion of the study.

Please discuss with your parents and contact us for more information:
